

# ENGINEERING (ENGR)

## ENGR 1. Introduction to Engineering. 1 Unit

**Prerequisite(s):** Engineering major status or instructor permission  
**Term Typically Offered:** Fall, Spring

Engineering study skills, fundamentals of the engineering design process and problem solving, current engineering challenges. Distinctions and similarities of different engineering disciplines. The engineering profession, ethics, teamwork, communication skills. Course helps students make an informed choice of their engineering majors.  
 Credit/No Credit

## ENGR 1A. Fundamentals of Engineering. 3 Units

**Prerequisite(s):** Algebra and trigonometry or instructor permission.  
**Term Typically Offered:** Fall, Spring

Problem solving skills needed in all areas of engineering offered at Sacramento State. Exposure to the different areas of engineering, and understanding of the relationship between them. Students will work in teams and complete hands-on engineering laboratory experiments and projects. Development of effective communication skills by presenting periodic oral and written reports. Computers will be used throughout. Lecture two hours, laboratory three hours.  
**Note:** Not for degree credit.

Credit/No Credit

## ENGR 2. Robotics Explorations. 3 Units

**Prerequisite(s):** Algebra and Trigonometry.  
**Term Typically Offered:** Fall, Spring

Introduction to robotics. History of robotics, recent advances in the field, common devices such as sensors and actuators. Use of modular robotic kits. Students will be assigned competition based projects.

## ENGR 6. Engineering Graphics and CADD (Computer Aided Drafting and Design). 3 Units

**Term Typically Offered:** Fall, Spring, Summer

In-depth graphical analysis and solution of typical three-dimensional space problems by applying the principles of orthogonal projection. Fundamentals of interactive computer aided design and drafting. Preparation of engineering drawings utilizing the CAD system. Lecture two hours; laboratory three hours.

## ENGR 6W. Engineering Graphics and CADD Workshop. 1 Unit

**Corequisite(s):** ENGR 6.  
**Term Typically Offered:** Fall, Spring, Summer

Problem solving and discussion of topics in Engineering Graphics and CADD (Computer Aided Drafting and Design) to enhance students' understanding of subject matter. Not for degree credit. Technical activity and laboratory, two hours.  
 Credit/No Credit

## ENGR 7. 3-D CAD Solid Modeling. 3 Units

**Prerequisite(s):** ENGR 4 or ENGR 6.  
**Term Typically Offered:** Fall, Spring

Applications of three-dimensional representation techniques as used in a typical CAD (computer aided drafting) software package (AutoCAD). Fundamentals employed in creating, modifying, analyzing and filing engineering drawings. This course will have a mechanical emphasis. Lecture two hours; laboratory three hours.

## ENGR 17. Introductory Circuit Analysis. 3 Units

**Prerequisite(s):** PHYS 11C, MATH 45; either the math or physics may be taken concurrently, but not both.  
**Term Typically Offered:** Fall, Spring, Summer

Writing of mesh and node equations. DC and transient circuit analysis by linear differential equation techniques. Application of laws and theorems of Kirchoff, Ohm, Thevenin, Norton and maximum power transfer. Sinusoidal analysis using phasors, average power.

## ENGR 17W. Circuits Workshop. 1 Unit

**Corequisite(s):** ENGR 17.  
**Term Typically Offered:** Fall, Spring, Summer

Elaborates on fundamentals and enhances students' understanding of circuits.  
**Note:** Not for degree credit.

Credit/No Credit

## ENGR 30. Analytic Mechanics: Statics. 3 Units

**Prerequisite(s):** PHYS 11A and MATH 31  
**Term Typically Offered:** Fall, Spring, Summer

Statics of particles. Equivalent systems of forces. Equilibrium of rigid bodies. Centroids, centers of gravity and forces on submerged surfaces. Analyzes trusses including use of computer programs. Analyzes frames and machines. Forces in beams including shear and moment diagrams. Friction. Moments of inertia.

## ENGR 45. Engineering Materials. 3 Units

**Prerequisite(s):** CHEM 1E and MATH 30. CHEM 1E may be taken concurrently.  
**Term Typically Offered:** Fall, Spring, Summer

Basic principles of mechanical, electrical and chemical behavior of metals, polymers and ceramics in engineering applications; topics include bonding, crystalline structure and imperfections, phase diagrams, corrosion, and electrical properties. Laboratory experiments demonstrate actual behavior of materials; topics include metallography, mechanical properties of metals and heat treatment. Lecture two hours; laboratory three hours.

**Note:** Fee course.

Fee course.

## ENGR 45W. Engineering Materials Workshop. 1 Unit

**Term Typically Offered:** Fall, Spring, Summer

Problem solving and discussion of topics in materials science to enhance students' understanding of subject matter. Activity two hours.  
**Note:** Can not be used for the degree requirement.

Credit/No Credit

**ENGR 50. Computational Methods and Applications. 3 Units**

**Prerequisite(s):** Math 30 and PHYS 11A; Physics 11A may be taken concurrently

**Term Typically Offered:** Fall, Spring

Computational methods for solving problems in analysis and design. Introduces lower division students to the use of computer technology for the computations required to solve real world problems in science and engineering. Includes introduction to numerical techniques, introduction to structured programming, and graphic visualization. Practical applications of analysis and design using tools such as MATLAB and C++. Emphasis is on developing confidence and skill in finding computational solutions to practical science and engineering problems. Portable computer recommended. Lecture three hours.

**ENGR 60. MEP Orientation and Problem Solving. 2 Units**

**Term Typically Offered:** Fall, Spring

Mandatory class for MEP freshman students on orientation to the University, its resources, facilities and faculty. Students will be encouraged to form a group atmosphere where they can freely interact with each other and value each other as resources. Students will be provided with instruction and materials on study skills, note taking, time management, preparing for tests and dealing with stress. Presentation by working engineers and field trips to engineering firms will be taken. Personal and professional development will also be part of the freshman orientations with leadership, public speaking and career planning being topics of discussion. Lecture one hour; activity two hours.

**Note:** Not for use as an engineering major technical elective and is not applicable to the baccalaureate degree.

Field trip(s) may be required.

**ENGR 70. Engineering Mechanics. 3 Units**

**Prerequisite(s):** PHYS 11A.

**Term Typically Offered:** Fall, Spring

Statics of particles. Equivalent systems of forces. Equilibrium of rigid bodies. Centroids, centers of mass and gravity. Analyzes trusses, frames and machines. Friction. Moments of inertia. Fundamental principles of kinematics and kinetics, study of motion and force analysis of particles and rigid bodies.

**ENGR 96A. Interdisciplinary Topics in Engineering. 1 Unit**

**Term Typically Offered:** Fall, Spring

Course will enable students to make an informed choice of their engineering majors, engage on interdisciplinary discussions between engineering fields, and equip them with relevant study skills. An introduction to engineering and the fundamentals of problem solving. Distinctions between different disciplines within engineering as well as other similarities. The engineering profession and ethics. Study skills for an engineering education.

Credit/No Credit

**ENGR 105. Sustainable Design and Construction. 3 Units**

**Prerequisite(s):** Upper division standing or instructor permission.

**General Education Area/Graduation Requirement:** GE AREA D

**Term Typically Offered:** Fall, Spring

Strategies, analysis methods, and processes of environmentally conscious planning, design, construction, operation, deconstruction, and assessment of engineered facilities. Presents a systematic framework for problem solving, decision making, design, and construction using the principles of sustainability as guiding objectives. Tools, and techniques for gathering information, generating, analyzing, and evaluation alternatives, and developing implementation strategies are presented and demonstrated.

**ENGR 110. Analytic Mechanics - Dynamics. 3 Units**

**Prerequisite(s):** Student must pass ENGR 30, MATH 45, and MATH 32 or MATH 35 or MATH 100 with a minimum grade of C- or better.

**Term Typically Offered:** Fall, Spring, Summer

Fundamental principles of kinematics and kinetics, study of motion and force analysis of particles and rigid bodies, application to idealized structures and physical systems, introduction to free and forced vibrations.

**ENGR 110W. Analytic Mechanics-Dynamics Workshop. 1 Unit**

**Corequisite(s):** ENGR 110.

**Term Typically Offered:** Fall, Spring, Summer

Problem solving and discussion of topics in dynamics to enhance students' understanding of subject matter. Activity two hours.

**Note:** Can not be used for degree requirement.

Credit/No Credit

**ENGR 112. Mechanics Of Materials. 3 Units**

**Prerequisite(s):** ENGR 30; ENGR 45; MATH 45; and either CE 4 or ENGR 6 (CE 4 or ENGR 6 may be taken concurrently).

**Term Typically Offered:** Fall, Spring, Summer

Stresses, strains and deformations in elastic behavior of axial force, torsion and bending members, and design applications. Statically indeterminate problems. Strain energy. Column stability.

**ENGR 115. Statistics For Engineers. 2 Units**

**Prerequisite(s):** MATH 31, may be taken concurrently.

**Term Typically Offered:** Fall, Spring

Application of statistical methods to the analysis of engineering and physical systems. Data collection, characteristics of distributions, probability, uses of normal distribution, regression analysis, and decision-making under uncertainty.

**ENGR 117W. Networks Workshop. 1 Unit**

**Corequisite(s):** EEE 117.

**Term Typically Offered:** Fall, Spring

Elaborates on fundamentals and enhances students' understanding of networks.

**Note:** Not for degree credit.

Credit/No Credit

<p><b>ENGR 120. Probability and Random Signals.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> EEE 180; may be taken concurrently.  <b>Term Typically Offered:</b> Fall, Spring, Summer</p> <p>Probability and random signals and their application in engineering systems. Topics include the random sample space model, concept of axiomatic probability, conditional probability, discrete and continuous random variables, probability density and distribution functions, functions and statistics of random variables, random vectors multivariate distributions, and correlation and covariance of random vectors. Applications include estimation, risk, signal detection, random signals and noise in linear systems, reliability, and estimation.</p>	<p><b>ENGR 181. Electronic Materials.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> CHEM 1A, PHYS 11A, MATH 45.  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Basic principles of materials behavior pertaining to electronics applications. Topics include electrical conductivity, bonding, crystal structures, optical properties, magnetic properties, energy transfer, and the fundamentals of some simple electronic devices. Lecture 3 hours.</p>
<p><b>ENGR 124. Thermodynamics.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> CHEM 1E, PHYS 11A, and MATH 32 or MATH 35 or MATH 100.  <b>Term Typically Offered:</b> Fall, Spring, Summer</p> <p>Study of thermodynamic principles and their applications to engineering problems. Includes a study of the first and second laws, the properties of pure substances and ideal gas, gas/vapor mixtures, and an introduction to thermodynamic cycles.</p>	<p><b>ENGR 194. Career Development Seminar.</b> <b>1 Unit</b>  <b>Term Typically Offered:</b> Fall, Spring</p> <p>This course is designed for all ECS majors making career decisions and developing a job search strategy. Instruction will include: effective career planning strategies and techniques including skill assessment, interests, values, job search organization and strategies, goal setting, and time management as well as professional image development including interview techniques, resume writing, employment related correspondence and portfolio construction. Guest speakers from industry will be featured.            Credit/No Credit</p>
<p><b>ENGR 124W. Thermodynamics Workshop.</b> <b>1 Unit</b>  <b>Corequisite(s):</b> ENGR 124.  <b>Term Typically Offered:</b> Fall, Spring, Summer</p> <p>Problem solving and discussion of topics in thermodynamics to enhance students' understanding of subject matter. Activity two hours.            Credit/No Credit</p>	<p><b>ENGR 196B. Energy and Modern Life.</b> <b>3 Units</b>  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Our "modern life" is intimately and increasingly intertwined with energy utilization. This course deals with where energy comes from, how it is converted to desirable forms, where it is consumed, and what the consequences of this consumption are. In each case, historical perspective, current status, and future projections will be discussed. The ultimate objective of this course is to help students to make informed decisions on energy-related issues in their personal life and as responsible citizens of the society.</p>
<p><b>ENGR 132. Fluid Mechanics.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> ENGR 110 (may be taken concurrently)  <b>Term Typically Offered:</b> Fall, Spring, Winter</p> <p>Lectures and problems in the fundamental principles of incompressible and compressible fluid flow.</p>	<p><b>ENGR 201. Engineering Analysis I.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> MATH 45.  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Mathematical methods for the solution of advanced engineering problems. Vector analysis, tensors and matrix algebra, complex variable techniques. The applications of these methods to practical engineering problems are demonstrated.</p>
<p><b>ENGR 140. Engineering Economics.</b> <b>2 Units</b>  <b>Prerequisite(s):</b> ENGR 17 or ENGR 30  <b>Term Typically Offered:</b> Fall, Spring, Summer</p> <p>Evaluation of economic consequences of engineering design proposals on projects. Emphasis on marginal or incremental economic analysis using Net Present Value, Annual Equivalence, Rate of Return and Benefit-Cost methods including multiple alternatives, taxes, uncertainty, inflation, organizational constraints and money market factors.</p>	<p><b>ENGR 202. Engineering Analysis II.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> MATH 45.  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Mathematical methods for the solution of advanced engineering problems. Solutions of ordinary and partial differential equations, Fourier series and Laplace transforms and operational calculus. The applications of these methods to practical engineering problems are demonstrated.</p>
<p><b>ENGR 150. Technical Communication.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> Recommendation based on the results of the WPG or instructor permission  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Practical technical communication for engineers and computer scientists. Topics covered include practical technical writing, improving technical writing style, development of strategies to improve writing, oral presentations, running effective meetings, and the use of visual aids. The use of appropriate communication technology is emphasized throughout the course.</p>	<p><b>ENGR 203. Engineering Statistics.</b> <b>3 Units</b>  <b>Prerequisite(s):</b> ENGR 115 or equivalent.  <b>Term Typically Offered:</b> Fall, Spring</p> <p>Applications of statistics to engineering problems. Collection and analysis of data, sampling methods, design of experiments, probability theory, decision theory, analysis of variance, regression analysis, and mathematical curve fitting.</p>

**ENGR 296A. Quality Management Systems for Engineers. 3 Units**

**Prerequisite(s):** Graduate Standing

**Term Typically Offered:** Fall, Spring

Designed to equip students with understanding of basic terms and definitions related to quality, a brief history and basic quality concepts, understanding measurement systems and tools, understanding differences of quality control (QC), quality assurance (QA) and quality management (QM), getting familiar with the applications of different tools, systems and standards and how to select proper tools for different quality requirements. Understanding basic inspection, auditing, assessment and evaluation techniques.
