

BA IN PHILOSOPHY (SCIENCE, REASON AND VALUES)

Units required for Major: 42
Total units required for BA: 120

Program Description

The concentration in Science, Reason and Values is designed for students who are interested in the philosophical, rational and moral foundations of science and its applications. This concentration provides an excellent double major opportunity for science students interested in broadening and deepening their understanding of the normative elements of their chosen field. It is also a good choice for philosophy students who are interested in graduate study in the philosophy of science.

The concentration focuses on providing students with a deep understanding of the nature of scientific rationality. Topics include scientific explanation, the nature of scientific evidence, the process of confirming and revising our theories and beliefs, the problem of decision under conditions of uncertainty, and the scientific study of social phenomena. The philosophy of science also explores traditional philosophical questions as they arise in the context of scientific inquiry. Some of these are: Do we really know that the theoretical entities of science exist? What is the difference between science and pseudo-science? Do different sciences give us fundamentally different ways of understanding the world? Is science converging on truth or will it always undergo revolutionary changes that reject widely accepted theories of the past? Does scientific inquiry have intrinsic value or are there questions that scientists should not ask?

Note: Philosophy majors must fulfill the GE Writing Intensive "supervenient requirement" with courses **in the major, only**.
